## **DETAILED ACTION**

### ***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-22 and 58 drawn to a fuel cell and electrochemical cell assembly, classified in class 429, subclass 12.
  - II. Claims 23-47 and 59, drawn to a method of forming a seal, classified in class 264, subclass 255.
  - III. Claims 48-57, drawn to a method of forming seals of a particular material, classified in class 524, subclass 588.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to form a seal in a materially different product, such as forming a seal around a liquid-tight container.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be

Art Unit: 1745

made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to form a seal in a materially different product, such as forming a seal around a liquid-tight container.

3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation since Invention II is drawn to the method of actively injecting the sealant into the apparatus while Invention III is drawn to the method of injecting the seal material, wherein the seal material has a particular chemical makeup.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must

Art Unit: 1745

be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
